TLIX5037 Plan logistics support for deployed operations

Release: 1

TLIX5037 Plan logistics support for deployed operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to plan logistics support for deployed elements of an organisation in support of organisational operations in accordance with relevant organisational policy and procedures.

This unit of competency is applicable to logistics personnel who have a responsibility to organise the delivery of logistics support in a deployed context. This person will typically plan logistics support for relatively simple operations. This type of operation would enable planning to be completed by an individual as opposed to a significant operation where planning is usually completed by a team of professionals and operational control is at the highest level of the organisation.

This role requires management and leadership skills.

Logistics support may be comprised of a range of capabilities from different disciplines including road transport, supply, maintenance, catering or health.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

X – Logistics

Unit Sector

Not applicable.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Analyse logistics requirement**
 - 1.1 Operational requirement is analysed to establish scope and intent of logistics support
 - 1.2 Operating environment is identified and information is sought to establish operational operating and logistics factors
 - 1.3 Limitations and constraints are determined to establish feasible and realistic courses of actions
 - 1.4 Critical facts and assumptions are made to allow planning to progress in the absence of developed knowledge of the current situation
- 2 Analyse risks to logistics support**
 - 2.1 Risk analysis is conducted to identify and mitigate against unacceptable risks in accordance with organisational policy and procedures
 - 2.2 Liaison with agencies involved in operational logistics is undertaken to ensure most effective coordination of effort
 - 2.3 Local population and organisations in operating area are analysed to identify possible disruption to logistics support
- 3 Develop logistics plan**
 - 3.1 Logistics situation is reviewed to inform planning
 - 3.2 Planning timeline is prepared to guide planning activities and to ensure sufficient time is allowed to disseminate information and subsequent preparation of personnel and equipment
 - 3.3 Logistics concept is created, based on analysis and principles of logistics, operational suitability, feasibility and acceptance by management
 - 3.4 Logistics plan is developed in accordance with organisational policy and procedures
 - 3.5 Logistics plan is adjusted in accordance with changing operational need
 - 3.6 Contingency plans are developed
 - 3.7 Logistics plan is communicated to stakeholders

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIX5037A Plan logistic support for deployed operations.

Assessment Requirements for TLIX5037 Plan logistics support for deployed operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing and validating numerical information accurately
- analysing task complexities such as limitations, freedoms, vulnerabilities, environmental considerations and time limitations
- applying a broad range of problem-solving strategies to planning outcomes
- applying relevant organisational policy and procedures
- applying planning process in response to a logistics support task in a deployed setting
- communicating effectively verbally and in writing
- interpreting instructions and applying to actions and tasks
- interpreting policies and procedures
- making decisive, informed decisions that align with organisational requirements
- managing own planning tasks in accordance with organisational requirements
- moving forward despite planning task difficulty
- preparing and issuing instructions that clearly communicate intent and operational tasks
- undertaking analysis to determine where internal and external factors impact on logistics support requirements and adjusting plans accordingly
- using appropriate information technology and software

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environment consideration in planning logistics support
- logistics concepts
- organisation, its function and logistics capabilities
- organisational policy and procedures pertaining to logistics
- organisational role relevant to specialist logistics support

- organisational writing conventions
- planning process
- risks to logistics support
- specialist understanding of customer and stakeholder requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.
