TLIX4011A Conduct logistics support analysis activities

Release: 1

TLIX4011A Conduct logistics support analysis activities

Modification History

Not Applicable

Unit Descriptor

Unit Descriptor

This unit involves the skills and knowledge required to conduct logistics support analysis activities. It includes the requirement to conduct a range of processes including the capture, recording, recovery and analysis of data; maintenance of associated workplace networks; and stakeholder requirements. Logistics support analysis describes the process for identifying and analysing the functional supportability requirements consistent with the Integrated Logistics Support Program. Materiel systems are a composite of equipment, skills and techniques capable of performing or supporting an operational role, or both. A complete materiel system includes all equipment, related facilities, materiel, software, services and personnel required for its operation and support, to the degree that it can be considered self-sufficient in its intended operational environment. There are no specific licensing or certification requirements applicable to this unit.

Application of the Unit

Application of the Unit

This unit was developed for logistics specialists working within materiel logistics but is applicable to any individual in broader logistic roles.

Typically these individuals must demonstrate the ability to work independently or as part of a team under direct and/or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs. All activities are carried out in accordance with relevant organisational policy and procedures.

Licensing/Regulatory Information

Refer to Unit Descriptor

Pre-Requisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Prepare to conduct logistics support analysis activities	1.1 Stakeholders are identified and consulted on materiel and materiel systems needs and capabilities in accordance with organisational policy and procedures 1.2 Effective relationships are developed with stakeholders through consultation 1.3 Legislation and organisational policy and procedures that may impact on logistics support analysis activities are identified and analysed 1.4 Sources of information relevant to logistics support analysis are identified and obtained in accordance with organisational policy and procedures 1.5 All personnel involved in logistics support analysis are briefed in accordance with standard procedures
2 Conduct logistics support analysis activities	2.1 Logistics support analysis methods and techniques appropriate to the area are employed in accordance with plans, schedules and standard procedures 2.2 Logistics support analysis activities are conducted and concluded within resource constraints 2.3 Logistics support analysis activities are implemented, monitored and amended based on changing circumstances in accordance with methodologies and procedures 2.4 Resources are allocated to logistics support analysis activities in accordance with the logistics support analysis plan and resource availability
3 Report on logistics support analysis activities	3.1 Logistics support analysis performance is reported to all stakeholders in a transparent manner and meeting all compliance requirements 3.2 Logistics support analysis activities are regularly reviewed to ensure systems and/or equipment capability is maintained throughout its life cycle in accordance with organisational policy and procedure
4 Maintain logistics support analysis records	4.1 Logistics support analysis records are completed in accordance with relevant policy and procedures 4.2 Logistics support analysis records are amended and documented in accordance with organisational policy and procedures

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Logistics support analysis processes
- Integrated logistics support processes
- Organisational policy and procedures related to logistics support analysis, including environmental, sustainability issues
- Organisational role relevant to logistics support analysis
- Product knowledge related to systems and/or equipment in service in the organisation
- Reliability, availability and maintainability
- Safety, legislative and statutory requirements, including environmental, sustainability issues relevant to logistics support analysis
- Written and oral communication to a level required in the preparation of correspondence and reports

Required skills:

- Apply logistics support analysis, integrated logistics support and project management knowledge relevant to work being performed
- Consult and negotiate with stakeholders (both internal and external) and resolve any potential areas of conflict or concern to ensure that overall objectives are achieved
- Demonstrate an understanding of the strategic objectives of the materiel logistics program to identify long-term factors and external considerations that need to be taken into consideration in conducting logistics support analysis activities
- Display resilience by continuing to move forward despite criticism or setbacks
- Identify, review and analyse information that may impact on the logistics support analysis activities or that may be impacted by the logistics support analysis activities
- Identify the relationship between organisational goals and recognise how own work contributes to the achievement of those goals
- Manage time and prioritise work to ensure objectives are met in accordance with required schedule
- Undertake performance measurement to enable objectives to be measured against defined parameters
- Use appropriate information technology and software

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Assessment must confirm the ability to:
 - adhere to and apply relevant data and information management processes
 - analyse data and information
 - apply knowledge of integrated logistics support to assist in work and to guide problem solving
- Competency should be demonstrated over time and should be observed in a range of actual or simulated work contexts

Context of and specific resources for assessment

- Competency should be assessed in the workplace or in a simulated workplace environment
- Access is required to:
 - computer and relevant software
 - legislation, guidelines, procedures and protocols relating to logistic support analysis
 - plans
 - workplace documentation

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- Where possible, assessment should be supported by questions to assess required knowledge. Questioning techniques should suit the language and literacy levels of the candidate
- Assessment methods should reflect workplace demands such as literacy and the needs of particular groups
- Assessment methods suitable for valid and reliable assessment of this unit of competency may include a combination of methods such as:
 - authenticated evidence from the workplace and/or training programs
 - case studies
 - demonstration
 - feedback from supervisors and peers regarding the candidate's ability
 - observation
 - portfolios
 - projects

EVIDENCE GUIDE

- questioning
- reviews or reports prepared by the candidate
- scenarios
- simulation or role plays

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Stakeholders may include:

- capability manager
- contractors
- customers
- project managers
- regulators
- subordinates
- supervisors
- suppliers

Materiel may include:

- all items (including ships, tanks, self-propelled weapon, aircraft etc. and related spares, repair parts and support equipment but excluding real property, installations and utilities) necessary to equip, operate, maintain and support designated activities without distinction as to its application for administrative or operational purposes

Organisational policy and procedures may include:

- Australian Standards
- international standards
- organisational instructions and standards

Legislation may include:

- relevant federal, state and local government legislation and regulations

Sources of information may include:

- contractors
- databases
- duty statements
- legislation
- managers
- peers
- plans
- policies

RANGE STATEMENT

	• procedures • publications • reference material • standards • supervisors • suppliers
Personnel may include:	• capability manager • contractors • customers • project managers • regulators • subordinates • supervisors • suppliers • team members
Logistics support analysis activities may include:	• data and information analysis • data and information management • data and information retrieval • identification of data and information • reporting • research
Resources may include:	• financial • information technology applications and tools • infrastructure • personnel • time
Methodologies and procedures may include:	• configuration management • life cycle costing • logistics support analysis • maintenance requirement determination • procurement • reliability centred maintenance • reliability, availability and maintainability • systems engineering
Compliance requirements may include:	• authority • delegations • environmental • legislative • organisational policy • regulatory

RANGE STATEMENT

Life cycle may include:

- whole of a particular item/system/process, from identification of a capability need to capability disposal
