UEPOPS091 Operate and monitor dust collection plant

Release: 1

UEPOPS091 Operate and monitor dust collection plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Electricity Supply Industry – Generation Sector Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to operate, inspect and monitor dust collection plant associated with a power station.

Power generation facilities will produce waste that must either be removed, recycled or stored. Dust produced from the generation of power must be disposed of using an established dust handling system.

Competency in this unit requires the ability to plan work, operate dust disposal plant, test dust disposal plant operation, respond to abnormal dust disposal plant operations, monitor and inspect dust disposal plant, and complete all documentation. Individuals will, in general, work under supervision, in a power generation facility as an operator.

Power generation plant operators are trained and authorised to isolate, prepare plant and issue permits to work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

There are no prerequisite units

Competency Field

Operations

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | |
|---|---|
| 1 Plan and prepare work | 1.1 Work health and safety (WHS)/occupational health and safety (OHS) regulations, legislative requirements, codes of practice, manufacturers' recommendations and specifications, environmental requirements and workplace procedures are identified, applied and monitored |
| | 1.2 Work requirements are identified from relevant personnel and documentation in accordance with workplace procedures |
| | 1.3 Inspection and field preparation for dust collection plant service is carried out in accordance with manufacturers' recommendations and specifications, and workplace procedures |
| | 1.4 Dust collection plant operational prerequisites are recognised in accordance with manufacturers' recommendations and specifications, and workplace procedures |
| | 1.5 Sequence for recommissioning of dust collection plant is determined in accordance with workplace procedures |
| 2 Operate dust collection plant | 2.1 Dust collection plant is operated in accordance with manufacturers' recommendations and specifications, and workplace procedures |
| | 2.2 Dust collection plant is monitored and observed to detect deviations from normal operating conditions in accordance with workplace procedures |
| | 2.3 Corrective action is taken to rectify abnormalities in accordance with workplace procedures |
| 3 Test dust collection plant operation | 3.1 Operational tests are performed in accordance with workplace procedures |
| | 3.2 Dust collection plant is observed for correct operational response in accordance with workplace procedures |
| | 3.3 Dust collection plant is returned to required operational status upon completion of testing in accordance workplace procedures |
| 4 Analyse dust collection plant faults | 4.1 Causes of abnormal dust collection plant operating conditions are identified by analysing technical and operational information in accordance with workplace procedures |

	4.2	Dust collection plant integrity and personnel safety is maintained in consultation with relevant personnel and technical and operational documentation in accordance with workplace procedures
5 Monitor and inspect dust collection plant	5.1	Dust collection plant is monitored and inspected for normal operation to detect deviations in accordance with workplace procedures
	5.2	Relevant personnel are notified when defects are detected in accordance with workplace procedures
6 Complete documentation	6.1	Dust collection plant problems, movements, abnormalities and status are reported in accordance with workplace procedures
	6.2	Documentation is updated in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UEP Electricity Supply Industry – Generation Sector Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UEPOPS242 Operate and monitor dust collection plant.

Assessment Requirements for UEPOPS091 Operate and monitor dust collection plant

Modification History

Release 1. This is the first release of this unit of competency in the UEP Electricity Supply Industry – Generation Sector Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least two separate occasions and include:

- analysing dust collection plant faults using data analysis techniques and tools
- applying work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
 - emergency procedures
 - risk control measures
 - safe working practices
- communicating with personnel
- completing documentation using recording procedures
- complying with regulations, legislative requirements, codes of practice, manufacturers' recommendations and specifications, and environmental requirements
- identifying and responding to abnormal dust collection plant operating conditions
- interpreting manuals
- monitoring and inspecting dust collection plant operations
- operating dust collection dust collection plant
- organising resources
- preparing and planning work
- preparing dust collection plant and equipment for operation
- recognising and identifying dust collection plant status
- testing dust collection plant operationally using diagnostic and testing techniques
- working with permit to work system.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of:

- arrangements of power production plant
- dust collection plant and equipment, location and operating parameters
- dust collection plant status

- manuals
- permit to work system
- regulations, legislative requirements, codes of practice, manufacturers' recommendations and specifications, and environmental requirements
- safe operating principles
- WHS/OHS requirements, including:
 - emergency procedures
 - risk control measures
 - safe working practices
- workplace documentation
- workplace policies and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.
