UETDRIS027 Diagnose and resolve faults in transmission systems

Release: 1

UETDRIS027 Diagnose and resolve faults in transmission systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Application

This unit includes the skills and knowledge required to diagnose and resolve faults in transmission systems in the electricity supply industry (ESI).

It includes interpreting diagrams and technical data, applying knowledge of energy supply and transmission systems to logical fault-finding and resolution.

It also includes transmission primary, secondary and communication systems, functional testing, and reporting work activities and outcomes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS026 Diagnose and resolve faults in electrical apparatus

UETDRIS032 Solve problems in network equipment

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS

Elements describe the essential outcomes.

PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1 Prepare to diagnose and resolve faults in transmission systems

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be done are reviewed and determined
- 1.2** Work plan is developed and confirmed, permissions obtained, and these are communicated with relevant personnel in accordance with workplace requirements
- 1.3** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.4** Hazards are identified, risks assessed, and control measures identified and applied
- 1.5** Work permits are determined in accordance with workplace requirements
- 1.6** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order

2 Diagnose and resolve faults in transmission systems

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights, working in confined spaces and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Work permits are received and signed in accordance with workplace requirements
- 2.4** Faults in transmission systems are diagnosed and resolved in accordance with workplace requirements

- | | | |
|--|------------|--|
| | 2.5 | Hazard control measures are monitored in accordance with workplace requirements |
| | 2.6 | Incidents or unplanned events are responded to in accordance with workplace requirements |
| 3 Complete work and documentation | 3.1 | Completed work is checked for compliance against the work plan and workplace requirements |
| | 3.2 | Incidents or unplanned events are reported in accordance with workplace requirements |
| | 3.3 | Plant, tools and equipment are cleaned, checked and returned to storage, and surplus resources and materials are managed in accordance with workplace requirements |
| | 3.4 | Work permits are signed off in accordance with workplace requirements |
| | 3.5 | Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is not equivalent to UETTDRI571 Diagnose and rectify faults in electrical energy supply transmission systems.

Assessment Requirements for UETDRIS027 Diagnose and resolve faults in transmission systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 4.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two (2) separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including:
 - work health and safety (WHS)/occupational health and safety (OHS) requirements
- identifying hazards, assessing risks, and identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation
- diagnosing and resolving faults in transmission primary and secondary systems, including:
 - interpreting system alarms and protection operations
 - applying logical diagnostic methods
 - using fault scenarios to test the source of system faults
 - recording information from control room and relevant personnel
 - identifying faults and assigning personnel in accordance with individual skills and competencies
 - considering the impact of outages on the network
 - resolving system faults
 - verifying that the system operates within parameters
 - documenting fault rectification.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including WHS/OHS requirements
- hazard, risk assessment and risk control requirements, including potential hazards

- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- workplace records, reports and documentation
- manuals, diagrams and drawings
- overview of distribution networks
- overview of transmission primary system, including:
 - lines
 - buses
 - transformers
 - converters
 - cables
 - circuit breaker configurations
- operating parameters of circuit breakers and switches, including:
 - principles of operation
 - voltage and current range
 - breaking capacity
- protection schemes
- nomenclature and nameplates
- high pressure air systems, and air storage and handling processes
- direct current (d.c.) auxiliary systems
- SF6 conditioning, storage and handling system
- spring charging mechanisms
- generation types and fundamentals of operation
- generator connection to transmission and distribution networks.
- principles of high voltage (HV) alternating current (a.c.) and d.c. transmission, including:
 - tower types and configurations
 - insulator types
 - types of conductors
 - line ratings
 - conductor terminations
 - harmonic filters
 - protection
- types of isolators
- control of voltage
- voltage collapse and system black, including:
 - under frequency trip
 - automatic load shedding
 - manual load shedding

- voltage control devices, including:
 - voltage regulators applied to generators and synchronous phase modifiers
 - electromagnetic voltage regulators
 - series and parallel capacitors
 - on-load tap changer (OLTC) transformers
 - static var compensation (SVC)
- overview of transmission secondary systems, including:
 - control and supervisory systems
 - protection schemes
- overview of the transmission communication systems, including:
 - telephone
 - power line carrier
 - dedicated cable
 - micro-wave links
 - fibre optics
- transient voltage levels in power systems, including:
 - switching
 - lightning
 - surge diverters
 - shield wires
 - insulation grading
 - corona discharge
- impact of natural disasters
- faults related to deteriorating components.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.
